

HSCRP (#855907, Final, 07/10/2023 9:35am)

Ordering Provider	GREGORY A. HOOD, MD, MACP, FRCP			Performing Lab	CLEVELAND HEARTLAB - MANUAL ORDER ONLY 6701 CARNEGIE AVE STE 500 CLEVELAND OH 44103	
Specimen/Accession ID	C1922306098			Specimen Source	SERUM PO	
Specimen Coll. Date	07/10/2023 09:35			Result Status	Final	
Specimen Rec. Date	07/11/2023 13:06			Report Status		
Specimen Reported Date	07/11/2023 22:32					
Report	Result	Ref. Range	Units		Status	Lab
HS-CRP	0.6	<1.0	MG/L		Final	CHLHARVEST
	The AHA/CDC Guidelines recommend hs-CRP ranges for identifying Relative Cardiovascular Risk in patients ages >17 years: <1.0 mg/L Lower Relative Cardiovascular Risk; 1.0-3.0 mg/L Average Relative Cardiovascular Risk; 3.1-10.0 mg/L Higher Relative Cardiovascular Risk. For patients with higher cardiovascular risk, consider retesting in 1-2 weeks to exclude a benign transient elevation secondary to infection or inflammation from the baseline CRP value. Persistent elevations of >10.0 mg/L upon retesting may be associated with infection and inflammation. The AHA/CDC recommendations are based on Pearson TA et al. Circulation. 2003;107:499-511.
